

### Automotive

#### System Requirements

- Windows Server 2008 R2, 2012 R2, or 2016
- Microsoft® .NET Framework

#### Components

- ActivePDF Webgrabber
- ActivePDF Toolkit

## Overview

### *Online Vehicle Configuration Tool*

#### Problem

Market leading car manufacturer is looking for a secure way of allowing their end users to configure vehicles online whilst maintaining image resolution and document fidelity

#### Solution

##### Web Content Conversion and Manipulation Tool

Using ActivePDF WebGrabber and ActivePDF Toolkit, we developed a solution that handled the dynamic conversion of HTML5 content to PDF, along with ActivePDF Toolkit to secure and stitch multiple files into a single PDF.

**WebGrabber** is the very first HTML-to-PDF server application, rendering W3C HTML5, CSS2/3, JavaScript, Flash and form fields to PDF. Running on the server, WebGrabber is designed for high performance and reliable fidelity.

**Toolkit** is a developer's library with hundreds of properties and methods that can achieve almost any PDF-related task. With a simple, straight-forward .NET and COM interfaces, Toolkit hides the complexities of PDF.
